

Summary

Full-stack Developer and Generalist proficient in a wide range of programming languages. Experienced in creating interactive web and mobile apps, complex enterprise solutions, and cloud services. Adept at working in diverse teams both on-site and remotely, with a history of taking on leadership roles. Passionate about productivity enhancement and automation. Actively involved in mentoring, tech evangelism, and organizing meetups and workshops.

Professional experience

Command Zero

Senior Software Developer

Since Oct 2023

Cyber threat intelligence and digital forensics tool.

aws, clojure, cockroachdb, jvm

Cisco XDR

Senior Software Developer

June 2020-Oct 2023

XDR (previously known as SecureX) is Cisco's famed cybersecurity threat detection and response platform.

- Since joining the team have worked on various parts of the platform, participated in expanding IROH (Incident Response Orcestration Hub) and CTIA (Cisco Threat Intelligence API).
- Hunted down and fixed many bugs; improved Elasticsearch stores; created different types of integrations for internal and third-party teams.
- Designed and developed a Web-UI for documentation team.
- Built an extensive API for the Cisco TAC (Technical Assistance Center) portal, reducing the number of incident escalations by nearly half.

aws, clojure, clojurescript, cypress.io, docker, elasticsearch, github actions, graphql, jvm, next.js, node.js, re-frame, react

Dividend Finance

Senior Software Developer

Nov 2018-May 2020

Dividend Finance offers residential solar loans, home improvement, and PACE financing products.

The stack consisted of web portals for homeowners and solar installers, including a comprehensive API for partners - financial institutions and solar equipment installation companies.

I have worked on the Clojure-driven API, loosely based on Luminus, with Salesforce and PostgreSQL as the systems of record.

circleci, clojure, clojurescript, heroku, jenkins, jvm, postgresql, puppeteer, rabbitmq, re-frame, react, s3, salesforce, selenium, terraform

Funding Circle

Senior Software Developer

Feb 2016-Aug 2018

circleci, clojure, clojurescript, docker, honeysql, jvm, kafka, mesos, om.next, re-frame, react, rethinkdb, ruby, ruby on rails

Mobitor

Lead Frontend Developer

Apr 2015-Feb 2016

angular, babel.js, bower, coffeescript, couchbase, docker, gulp.js, karma, node.js, postcss, protractor, rx.js

Invitae

Lead Frontend Developer

May 2014-Apr 2015

The frontend apps we've built in Clojurescript (Re-frame), utilizing Material UI React components, and designed to be responsive and usable on Desktop and Mobile.

- Built an improved and revised web-portal.
- Created an audit log system from scratch.
- Helped to launch a partnership program with multiple capital providers such as Keybank.
- Implemented internal document warehousing system.
- Vastly improved testing practices and test coverage.

Funding Circle is a peer-to-peer lending platform.

- I have built a web-portal for FinOps teams, to allow them to track transactions, monitor deposits, manage reconciliations, etc., while maintaining net capital compliance.

Portal was built in Clojurescript, initially using Om.next, and later we switched to Re-frame. A set of APIs, made with Clojure, were created for the backend. Materialized views in PostgreSQL were used, where data gets aggregated from Kafka clusters ingested via Kafka Connect.

We introduced unique concepts on the front end, such as using Integrant to compartmentalize UI elements into individual components - specs, styles, and render functions, essentially transforming them into highly versatile Lego pieces.

- I have organized and hosted local meetups.
- Multiple "Best team" prizes. I was repeatedly nominated and awarded the "Employee of the month"

Mobitor was a startup specializing on Medical Equipment Logistics.

I have implemented a web portal for managing medical devices - orthopedic, spine surgery implants, supplemental equipment.

Used Angular, paired with a Node backend, which communicated with a .NET API on C# and MS SQL Server.

Invitae specializes in diagnostic DNA sequencing.

I've designed and implemented an asset tracking/dashboard web app with various charts, graphs and spreadsheets. Angular based, it was written in Coffeescript, and supported by Python backend on Django.

angular, browserify, coffeescript, d3.js,
django, elasticsearch, gulp, karma,
node.js, protractor, python, ramda.js,
rxjs, stylus-css

Vevo

Senior Software Developer

Jan 2012-May 2014

Vevo is the World's Leading Music Video Network.

- Designed and implemented cloud-based, task-driven, concurrent, scalable video encoding system.

Redesigned the entire system from scratch, making it vastly more efficient. Benchmarks showed a tenfold increase in efficiency.

- Lead a group of developers in re-building Admin Web Site for partners and internal use. ASP.net, Angular.js.
- Implemented Chromecast integration for Google's pilot program, demonstrating its compatibility with apps like Vevo.
- Built the Apple TV Vevo App.
- Played major part in redesigning the main website - vevo.com.

angular, asp.net, c#, coffeescript,
dynamo db, f#, javascript, ms sql
server, node.js, s3, sqs, typescript

Bunk1.com

Frontend Developer

2011

Bunk1 helps parents stay in touch with kids in summer camps.

- Designed an aesthetically pleasing and functional calendar widget for the web application (ASP.net, jquery).
- Developed an iOS App on Xamarin stack.

asp.net, backbone, c#, javascript,
jquery, objective-c, xamarin tools

jobs prior to 2011 are not listed; a comprehensive list can be provided upon request.

Education

Bachelor of Engineering

Tashkent University of Information Technologies.
