About me:

- For the past few years mostly I've been working on front-end (web) side of things, developing proprietary products. Sadly, full-time job leaves me very little time for open-source projects.
- I am looking for a role where I would be creating modern web/hybrid apps backed by Clojurescript/Clojure or Node.js. Recently I fell in love with Clojure and I would like to extend my exposure into this amazing language. I might be also interested in exploring other languages with strong functional emphasis, e.g: Elm, Haskell, Purescript or Scala.
- I am capable of building interactive, responsive and adaptive web sites, scalable enterprise level solutions with complex UI and logic, mobile apps, cloud services and APIs
- Fanatic of automated testing, I often choose reusable components and microservices instead of creating monolithic structures
- I prefer functional programming constructs, I love reactive programming. I understand OOP principles as well, and apply them when see fit
- I constantly try to improve my productivity. Time spent on learning Vim, Emacs and plethora of other tools is my best investment
- I've attained proficiency in: JavaScript, Coffeescript, Typescript, Livescript, Clojure, C#, Python. I am Familiar with Ruby, Java and Emacs Lisp

Professional experience

Mobitor

Lead Front-end Developer

since Apr 2015

Walnut Creek, CA
